Subject: Academic Use of Automation Studio since 2013

Dear Sir,

We appreciate Indiasoft for being with us from long time and providing us prompt technical help and supportservices. Hereby we would like to thank you for providing simulator like Automation Studio which has made our Industrial Fluid Power and Mechatronics Lab comprehensive.

Our students from PG are using this software for Automation and Robotics labs. Faculties as well as students are using Automation Studio for their academics as well as project works. Considering our loaded and time bound academic schedule simulators like Automation Studio becomes very handy in explaining multidisciplinary subjects like Hydraulics, Pneumatics, and Mechatronics.

We perform simulation exercises on Automation Studio and then conduct practical on trainer kits so that students gain sufficient knowledge and confidence to operate hardware. Automation Studio made our students thinking beyond conventional trainer kits as they couldbuild their circuitswith variety of components from its multi domain libraries available in Automation Studio.

We are interested to few more license of Automation Studio for our UG and PG. We wish you to continue your proactive support and request you to arrange Student and Faculty training program at Malnad College of Engineering.

  
(Dr. C. V. Venkatesh)
